

PREMIUM VOICE

Are you looking for an invoicing method for your voice services? We offer you a 5-digit premium voice short code!

A brilliant possibility to make e.g. a voice portal with various news topics, a chat community or a pre-listening platform billable. In addition, you get a "punchy" 5-digit short code, which is accepted by the end-user. These short codes have already proven to be successful in the premium SMS market. There is one number you can reach via voice, SMS and MMS.

Premium voice is an attractive possibility to bring together SMS and voice, which have been separated so far. From now on, you have the possibility to activate 5-digit short codes, which can be reached via SMS and/or voice. Of course you can activate your short code for voice only.

So you benefit from another possibility to serve your clients. The number can be allocated to a premium price per minute or per SMS or invoiced with the dispatch of a SMS content. In addition, your ring tone offer can be upgraded with a pre-listening function including

an order facility, a chat community or a voting number, which can be reached via SMS and/or voice. Or what about an information service on sport events with the latest news and interviews or a global economy or a stock exchange platform?

You see, there are different possibilities in the applications. All you need is a marketable service and a voice platform. Certainly, you can use our voice platform as well! Look and see...just dial 22022 (Eplus € 1.99/ min.).

More details? Send an e-mail with **VOICE** to info@net-m.de!
